PROFILE

IT professional with over 7 years of experience in planning, implementing, and managing complex IT infrastructures for business customers. Specialized in Windows Server, virtualization, Microsoft 365, Linux, and networking technologies. Experienced in independently delivering infrastructure projects, performing server migrations, and troubleshooting complex system issues. Additional expertise in full-stack web development, automation, and deployment of containerized applications.

PROFESSIONAL EXPERIENCE

ITM GmbH (Rosenheim) - System & Network Administrator 2019 - present

- Planning, deployment, administration, and migration of Windows Server and Linux infrastructures for business customers.
- Implementation and management of Microsoft Hyper-V environments, including physical hosts, virtual machines, virtual networking, and storage configuration.
- Administration of Windows Server environments, including Active Directory (AD DS), Group Policy (GPO), file servers, Remote Desktop Services (RDS), DNS, and DHCP.
- Deployment and administration of Microsoft 365 and Entra ID, including Exchange Online, Teams, SharePoint, OneDrive, identity and access management, and tenant migrations.
- Configuration and maintenance of network infrastructure, including TCP/IP, VLANs, routing, VPN connectivity, and firewall policies.
- Administration of Veeam Backup & Replication, including backup configuration, monitoring, and system recovery.
- Deployment and maintenance of Linux-based web and database servers, Docker environments, and automation using PowerShell and Bash.
- Troubleshooting complex infrastructure incidents, executing system migrations, and providing technical support to German-speaking business customers.

Freelance - Web Application Development 2023 - present

- Design and development of full-stack web applications using TypeScript, React, Next.js, and Vue.js.
- Development of REST APIs, backend services, and PostgreSQL databases, including database schema design and integration.
- Deployment and administration of containerized applications using Docker, Docker Compose, and Linux-based hosting environments.
- Configuration and management of hosting infrastructure on Hetzner and AWS, including web servers, reverse proxies, SSL/TLS certificates, and DNS.
- Implementation of CI/CD workflows using GitHub Actions, with a focus on automated builds, deployments, and application maintenance.
